| ABOUT ME

A young, hard-working, diligent, physically fit, responsible and committed person. Willing to learn and work. Good problem-solving and adaptation skills. Easy to socialize, very good at working in a team and quite flexible.

| WORK EXPERIENCE

Free Lancer

2022 – Present

As a freelancer, I have amassed extensive experience with a diverse array of technologies, including Java, C#, JavaScript, React, Next.js, HTML, and CSS, among others. My primary projects have encompassed numerous web portfolios and various web applications for scheduling appointments. This role has provided me with significant exposure to different clients, projects, and especially a wide range of technologies.

C# Developer & Help Desk

2023 – 2023

Jofebar

As a programmer at Jofebar, I was entrusted with the enhancement and implementation of the company's employee portal. My primary technological proficiencies included C# .NET, DevExpress, JavaScript, HTML, and CSS. Additionally, I gained some experience with React.

C# / .NET Developer

2023– Present

Parfois

As a software developer at Parfois, I primarily utilize C#, DevExpress, .NET, and Entity Framework. The project involves a desktop application dedicated to managing the logistics sector. My responsibilities include implementing new features and updating existing tools.

| PROJECTS

Cloud

did a project in which I transformed an old computer into a cloud. In this project I had help from a colleague who, in short, I transformed an old computer into a cloud using an Apache server. Later we started testing some features created by us, such as sending files from other computers to the server, photos, documents, etc...

The project is not yet finished although I have the idea of creating a graphical interface to be more appealing and in the future to be able to send files via smartphone.
